

Software Development Project

Multilingual: Text to Speech
Presentation 4

Albert Millert
Shalini Priya
Wenjun Sun
Soklay Heng

Completed

1. Language classifier + prediction
2. Server + modules connection
3. Web app - server connection
4. English TTS

Test with unseen data

classifier.pyserver.py M xREADME.md

PROBLEMSOUTPUTDEBUG CONSOLETERMINALMETALS

* Restarting with stat

The tokenizer class you load from this checkpoint is not the same type as the class this function is called from. It may result in unexpected tokenization.

The tokenizer class you load from this checkpoint is 'DistilBertTokenizer'.

The class this function is called from is 'BertTokenizer'.

Some weights of the model checkpoint at distilbert-base-uncased were not used when initializing DistilBertModel: ['vocab_projector.bias', 'vocab_transform.weight', 'vocab_projector.weight', 'vocab_layer_norm.weight', 'vocab_layer_norm.bias', 'vocab_transform.bias']

- This IS expected if you are initializing DistilBertModel from the checkpoint of a model trained on another task or with another architecture (e.g. initializing a BertForSequenceClassification model from a BertForPreTraining model).

- This IS NOT expected if you are initializing DistilBertModel from the checkpoint of a model that you expect to be exactly identical (initializing a BertForSequenceClassification model from a BertForSequenceClassification model).

Available server-side functionality

- language classification (done)
- English speech synthesis (in progress)
 - works but not plugged in
- French speech preprocessing (in progress)
 - works but still waiting for next step
- French speech synthesis (next step)

Providing the app as a service

- frontend app container
- server container
 - when deployed - should come with the pretrained models
 - can be heavy
 - should be accessible by the other container
 - react app is actually running on the client side in the browser

Next steps on the server-side

Incoming sentence request

- if French
 - request to external API to obtain base phonemes
 - convert based on conversion dictionaries
 - pass these to French TTS model
- if English
 - pass to the English TTS model

In both cases send back a response
in a format supported by the frontend
